The Time Value of Money : A Tutorial - Financial Planning

The future value factor (growth factor) is the future value of \$1 at interest rate i for n periods. The future value of a single sum in n years is determined by $(1 + i)^n$ FVF $i, n = (1 + i)^n$ The present value factor (discounting factor) is the present value of \$1 received or paid at the end of the n th year with the rate i .

money today or one year from today. If the amount is \$115, then the time value of money over the coming year is \$15. If the amount is \$110, then the time value is \$10. In other words, if you will receive an additional \$10 a year from today, you are indifferent to receiving the money today or a year from today. When discussing the time value of money, it is

The time value of money is the greater benefit of receiving money now rather than later. It is founded on time

preference. The principle of the time value of money ...

Time value of money - Wikipedia

Time Value of Money Example. Assume a sum of \$10,000 is invested for one year at 10% interest. The future value of that money is: $FV = \$10,000 \times (1 + (10\% / 1) ^ (1 \times 1) = \$11,000$. The formula can also be rearranged to find the value of the future sum in present day dollars. For example, the value of \$5,000 one year from today, compounded at 7% interest, is:

Time Value of Money - TVM - Investopedia

2 Time Value of Money Learning Objectives After studying this chapter you will be able to:
• Understand the Concept of time value of money.
